

The Resorbable Collagen Membrane

Instructions for Use for OSSIX® VOLUMAX

DESCRIPTION
OSSIX® VOLUMAX is a biodegradable and biocompatible collagen membrane intended for use during the process of guided tissue and bone regeneration. It is produced by standardized and controlled manufacturing procedures.

The collagen is extracted from porcine tendons subjected to veterinary inspections purified to prevent hypersensitivity reactions. OSSIX® VOLUMAX is packaged in a sealed double blister contained in a cardboard box and is terminally sterilized by ethylene oxide (EO).

OSSIX® VOLUMAX is intended for a single use.

PROPERTIES
OSSIX® VOLUMAX has been demonstrated to be biocompatible. Animal and human clinical testing show a low potential to induce hypersensitivity.

OSSIX® VOLUMAX has a porous structure; the size of the pores is small enough to occlude gingival cells but large enough to allow the passage of fluids, nutrients and plasma proteins, which are necessary to support healing (see reference h below).

OSSIX® VOLUMAX is not self-supporting and therefore it is recommended to use in conjunction with support such as an autogenous bone graft, allograft, xenograft, osteoconductive and/or inductive bone substitute, or a mixture of these.

OSSIX® VOLUMAX does not dissolve or disintegrate when wet.

OSSIX® VOLUMAX conforms exactly to the shape of the alveolar ridge.

An animal study has shown that OSSIX® VOLUMAX degradation is completed within approximately 6 months.

INDICATIONS

OSSIX® VOLUMAX is a resorbable collagen membrane intended for use during the process of guided bone regeneration (GBR) and guided tissue regeneration (GTR) as a biodegradable barrier for:

- Ridge augmentation for later implant insertions.
- Site and ridge augmentation and implant insertions.
- Ridge augmentation around implants inserted in delayed extraction sites.
- Ridge augmentation around implants inserted in immediate extraction sites.
- Alveolar ridge preservation consequent to tooth (teeth) extraction.
- Over the window in lateral window sinus elevation procedures.
- In implants with vertical bone loss due to infection, only in cases where satisfactory debridement and implant surface disinfection can be achieved.
- In intra bony defects around teeth.
- For treatment of recession defects, together with coronally positioned flap.
- In treatment of defects in multi-rooted teeth.
- Localized gingival augmentation.

CONTRAINDICATIONS

OSSIX® VOLUMAX must not be used in:

- Patients with known collagen hypersensitivity.
- Patients with sensitivity to porcine-derived materials.
- Patients suffering from autoimmune diseases and connective tissue diseases, such as: systemic lupus erythematosus, dermatomyositis.

⚠ **WARNINGS AND PRECAUTIONS**

- OSSIX® VOLUMAX is intended for a single use device. Do not re-sterilize OSSIX® VOLUMAX.
- Treatment of high risk patients, such as: smokers, patients suffering from uncontrolled diabetes mellitus, and uncontrolled root caries should be considered.
- The safety of treatment with OSSIX® VOLUMAX in pregnant and nursing women and in children has not been yet established.
- The outcome of regenerative procedures may be impaired in patients suffering from untreated periodontitis. Infection control and good oral hygiene should be achieved prior to surgical intervention.

ADVERSE EVENTS

- Post-marketing experience with OSSIX® PLUS, which is a thinner version of the membrane, reveals an excellent safety profile.
- Adverse reactions with OSSIX® PLUS collagen membrane were not observed.
- Yet, as the membrane is of a collagen origin, allergic reactions (e.g. erythema, swelling, induration and/or pruritus at treatment site) may not be entirely excluded.

DIRECTIONS FOR USE

- Special instructions for use in periodontology
Basic requirement for successful periodontal treatment includes eradicating the underlying bacterial infection as well as adequate oral hygiene. Therefore, prior to surgical intervention, patients must receive a hygiene phase of treatment, consisting of oral hygiene instructions, scaling and root planing, and occlusal adjustment when indicated. A postoperative maintenance phase can help to ensure long-term therapeutic success.

- The bony defect should be exposed by full thickness mucoperiosteal flaps.
- All soft tissues should be removed.
- In GTR the root surface should be carefully debrided and planed. Do not use radiolucide, since it may be difficult to detect.

- The cortical plate can be perforated in order to allow osteogenic tissues from the bone marrow to colonize the regenerating site.
- By using sterile a-traumatic instruments and sterile gloves rinsed with sterile saline, OSSIX® VOLUMAX is removed apically from the package.
- OSSIX® VOLUMAX should be immersed (the inner blister can be used as a dish) for 30 seconds in sterile saline, to allow for its expansion to its final dimensions (10x12,5 x 15x25 mm, 25x30 mm and 10x40 mm). Initial trimming of the estimated final size may be performed prior to sterile saline immersion.

- Trimming to the required dimensions: It is recommended that OSSIX® VOLUMAX extends 3-4 mm beyond the margins of the defect. One-two mm of uncovered bone to adjacent teeth must be allowed.
- OSSIX® VOLUMAX is cut with sterile scissors over a sterile container, try-in over the defect with a traumatic instruments should be performed.

- The site to be sutured should be filled with a space-maintaining dressing. The user should follow the manufacturer's instructions for the material used.
- OSSIX® VOLUMAX should be secured under the lingual flap, then a bone graft placed, and the membrane carefully adapted over the defect. The membrane will adhere to the underlying tissue; additional fixation of the membrane should be considered. Fixation should not be attempted if the membrane is not recommended as it may tear the membrane. Fixation with overlying sutures is advised. This may be achieved by anchoring a mattress suture in the apical periosteum buccally and lingually.
- The mucoperiosteal flaps are sutured while ensuring that the tissue is not under tension. Do not compromise blood supply to the flap.

- In GTR, the use of a periodontal dressing may be considered. GUIDELINES FOR THE PATIENT
The success of any surgical treatment depends on fulfilling the directions for use along with guiding the patient, as follows:

- Preoperative patient's education regarding adequate oral hygiene and meticulous prophylaxis
- Postoperative patient's care, e.g.:
 - Soft diet, avoidance of contact with tongue, hard food or denture.
 - Avoidance of contact with hot temperature food or liquids that may cause early disintegration of the collagen matrix.
- In the RTG, the use of a periodontal dressing may be considered.

STORAGE AND HANDLING

- OSSIX® VOLUMAX should be used by skilled, experienced and/or trained dental surgeons.
- The material should be handled using sterile gloves or sterile a-traumatic instruments.
- Placement of OSSIX® VOLUMAX should be performed after membrane's immersion in saline for 30 seconds.
- Do not use the membrane if it is torn and/or damaged.
- Do not use the membrane, in the event that the sterile packaging is opened and/or damaged.
- Any remaining / unused membrane should be discarded according to local regulations.
- OSSIX® VOLUMAX should be stored at temperatures between 5-30°C (59-86°F).
- Do not use the membrane after the expiration date.

HOW SUPPLIED

- OSSIX® VOLUMAX is available in a double blister pack, for single use only. Each pack contains one membrane.
- OSSIX® VOLUMAX is available in four sizes: 10x12,5 mm, 15x25 mm, 25x30 mm and 10x40 mm.

Caution: Federal (USA) law restricts this device to sale by or on the order of a licensed health care professional.

The symbols glossary is provided electronically at <https://www.datadental.com/en/resources/clinicians/symbols-glossary/>

For any further assistance/support/questions, please contact the local distributor or manufacturer.

- Clinical experience with OSSIX® PLUS, which is a thinner version of the membrane, reveals no inflammatory signs following accidental exposure. The membrane degrades slowly in the oral environment and the exposed area is covered by connective tissue and epithelium within a few weeks (see references a-h below).
- Possible complications with any surgery in the oral and maxillo-facial region include: infection, flap slough, perforation, abscess formation, bone loss, pain, soft tissue irregularities, and complications associated with the use of anesthesia.
- Depending upon the type and severity of the complications, as judged by the dental surgeon, membrane removal may be indicated.

- OSSIX® VOLUMAX should be used by skilled, experienced and/or trained dental surgeons.
- The material should be handled using sterile gloves or sterile a-traumatic instruments.
- Placement of OSSIX® VOLUMAX should be performed after membrane's immersion in saline for 30 seconds.
- Do not use the membrane if it is torn and/or damaged.
- Do not use the membrane, in the event that the sterile packaging is opened and/or damaged.
- Any remaining / unused membrane should be discarded according to local regulations.
- OSSIX® VOLUMAX should be stored at temperatures between 5-30°C (59-86°F).
- Do not use the membrane after the expiration date.

Caution: Federal (USA) law restricts this device to sale by or on the order of a licensed health care professional.

Resorbbeerbaar collageenmembraan

Gebruiksaanwijzing voor OSIX® VOLUMAX

OMSCHRIJVING
OSIX® VOLUMAX is een biologisch afbreekbaar en biocompatibel collageenmembraan bedoeld voor gebruik gedurende het proces van lokale botopbouw (Guided Bone Regeneration, GBR) en tandvleescorrectie (Guided Tissue Regeneration, GTR). Het wordt geproduceerd via gestandaardiseerde en gecontroleerde productieprocedures.

Het collageen is afkomstig van randskippen die door een veerarts worden geïnspiceerd en worden gedroogd om overgevoeligheidsreacties te voorkomen. OSIX® VOLUMAX is verpakt in een dubbele, afgesloten blisterverpakking in een kartonnen doos en wordt final gesteriliseerd met ethyleenoxide (EO).

OSIX® VOLUMAX is bedoeld voor eenmalig gebruik.

EIGENSCHAPPEN
Van OSIX® VOLUMAX is aangetoond dat het biocompatibel is. Uit klinische testen bij mensen en dieren blijkt dat het een gering vermogen heeft om overgevoeligheid te induceren.

OSIX® VOLUMAX heeft een poruze structuur. De grootte van de poriën is klein genoeg voor het inlaten van tandvleescellen, maar groot genoeg voor het doorlopen van bloedst. OSIX® VOLUMAX is gemaakt van plasma-geïoniseerd en in een dubbelblisterverpakking (GTR) is het vóór gebruik gesteriliseerd met ethyleenoxide (EO).

OSIX® VOLUMAX is niet zelflignanoend en is daarom aanbevolen voor gebruik in combinatie met een steun, zoals een augments bottransplantaat, alltransplantaat, xenotransplantaat, osteoconductief en/of -inductief botsubstitutaat of een combinatie van deze mogelijkheden.

OSIX® VOLUMAX ontbndt en desinfectieert niet wanneer het nat is. OSIX® VOLUMAX past zich gemakkelijk aan de vorm van de alveolaire rand aan.

In een diertstude is aangetoond dat de afbraak van OSIX® VOLLUMAX binnen ongeveer 6 maanden is voltooid.

INDICATIES
OSIX® VOLUMAX is een resorbbeerbaar collageenmembraan bedoeld voor gebruik gedurende het proces van lokale botopbouw (Guided Bone Regeneration, GBR) en tandvleescorrectie (Guided Tissue Regeneration, GTR) als een biologisch afbreekbare barriere voor:

1. Randopbouw om later te implanten
2. Geïmplificeerde randopbouw en implantatie
3. Randopbouw rond een implantaat in locaties voor uitgesteld extractie
4. Randopbouw rond een implantaat in locaties voor onmiddellijke extractie
5. Behoud van alveolaire rand na extractie van één of meer tanden
6. Over het venster bij procedures voor elevatie van het lateraal sinusvenster
7. Voor implantaten met verticaal botverlies wegens een infectie, alleen indien de implantaatopbouw voldoende kan worden gebreedend en gedefinieerd
8. Bij defecten in het bot rond de tanden
9. Voor behandeling van recessiedefecten in combinatie met coronaal geplaste flap
10. Bij furcaaldefecten bij tanden met meer dan één wortel
11. Geïsoleerde tandvleesopbouw

CONTRA-INDICATIES
OSIX® VOLUMAX mag niet worden gebruikt bij:

1. Patiënten met overgevoeligheid voor collageen.
2. Patiënten met overgevoeligheid voor materialen afkomstig van dieren.
3. Patiënten die lijden aan auto-immunologische ziektes van het bindweefsel, zoals: systemisch lupus erythematosus, dermatomyositis etc.

WAARSCHUWINGEN EN VOORZORGEN

1. OSIX® VOLUMAX is bedoeld voor eenmalig gebruik. OSIX® VOLUMAX niet hersteriliseren.
2. Behandeling van riscopatënten, zoals rokers, patiënten die lijden aan ongecontroleerde diabetes mellitus en ongecontroleerde periodontale ziekte, kan negatief worden beïnvloed.
3. De veiligheid van een behandeling met OSIX® VOLUMAX voor zwangere vrouwen, vrouwen die borstvoeding geven, en kinderen is niet bekend.
4. De resultaten van regeneratieve procedures kunnen minder goed zijn bij patiënten die lijden aan onbehandelde periodontitis. Controle van infecties en goede mondhygiëne zijn vereist vóór de chirurgische interventie.

BIJWERKEN

1. Ervaringen na commercialisering van OSIX® PLUS, de dunne versie van het membraan, hebben een uitstekend veiligheidsprofiel aangetoond.
2. Bijwerkingen met een OSIX® PLUS-collageenmembraan zijn niet waargenomen.
3. Aangezien het membraan van collageen afkomstig is, kunnen allergische reacties (bijv. erytheem, zwelling, verharding en/of jeuk) op de plaats van behandeling) echter niet volledig worden uitgesloten.

GEbruiksaanwijzingen

1. Speciale instructies voor gebruik in de periodontologie: De basisrecepten voor een geïmplificeerde periodontale behandeling zijn uit het uitpakken van de onderliggende bacteriële infectie en een adequate orale hygiëne. Daarom moeten patiënten voorafgaand aan de chirurgische ingreep een behandelingsfase doorlopen die gericht is op hygiëne, bestaande uit instructies voor orale hygiëne, goede gebitshygiëne en een occasionele aanpassing indien nodig. Een postoperatief fase van lokale desinfectie kan bijdragen aan een langdurig therapeutisch succes.
2. Het botdefect moet worden blootgelegd door een mucoperiosteale flap thickness optkap.
3. Alle zachte weefsels moeten verwijderd.
4. Bij weefselsretractie en GTR moet het worteloppervlak zorgvuldig worden voorbereid. Het moet geschikt. Conditionering van de wortel moet worden overgevoerd.
5. De corticale plaat kan worden geforeerd om osteogeen weefsel van het beemerged de gelegenheid te geven om de regeneratieve reactie te koloniseren.
6. Met gebruik van steriele, traumatische instrumenten en steriele handschoenen worden OSIX® VOLUMAX toegevoerd. Het gebruik van OSIX® VOLUMAX op aspeeltische wijze uit de verpakking gehad.
7. OSIX® VOLUMAX moet gedurende 30 seconden in een steriele zuigtoestel worden ondergedompeld (u kunt de binnenbistier gebruiken als schaalje), zodat het product uitzat tot het definitieve afmetingen van het defect worden bevestigd door een mucoperiosteale flap thickness optkap.
8. Terengrenzen tot de vereiste afmetingen: anbevolen wordt dat OSIX® VOLUMAX 3 tot 4 mm buiten de rand van het defect uitsteekt. Er moet één à twee mm onbedekt tot zijn toe de tanden ernaast.
9. Knip OSIX® VOLUMAX met een steriele schaar boven een steriele container. Precisie plaatsen over het defect met traumatische instrumenten.
10. De opbouwlocatie moet worden gevuld met ruitenhoudende materiaal op te volgen.

1. Maak OSIX® VOLUMAX vast onder de linguale flap, plaats vervolgens een bottransplantaat in pas dan het membraan voorzichtig aan het defect aan. Het membraan zal aan het onderliggende weefsel kleven; extra fixatie van het membraan moet worden overgevoerd. Fixatie met schroefjes of spijkertjes of hechtmateriaal door het membraan heen wordt afgeraden omdat het membraan hierdoor zou kunnen scheuren. Fixatie met overliggende hechtingen wordt aanbevolen. Dit kan worden bereikt door buccale en linguale een matschieting in het apicale periosteum te verankeren.
2. Hecht de mucoperiosteale optkap zodanig dat er druk wordt uitgeoefend op het weefsel. De bloedvaten naar de plek van het defect mag niet worden belemmerd.
3. Voor GTR kan het gebruik van een periodontaal verband worden overgevoerd.

RICHTLIJNEN VOOR DE PATIENT

Voor succes bij een chirurgische ingreep is het altijd nodig dat de gebruiksaanwijzing wordt gevolgd en dat aan de patiënt de onderstaande instructies worden gegeven:

1. Vóór de ingreep moet de patiënt de aangegeven instructies voor mondhygiëne krijgen en gedurende procedure.
2. Postoperatieve nazorg, zoals:
 - Zacht voedsel eten, aanraking vermijden met de tong, hard voedsel of een kunstgebit.
 - Contact met heet voedsel of hete vloeistoffen vermijden, aangezien dit voortijdige desintegratie van de collageenmat kan veroorzaken.
 - Gebruik het membraan niet als het onderliggende weefsel gedurende één minuut tweemaal daags of volgens de instructies van de fabrikant.
3. Postoperatieve AANDACHTSPUNTEN
 - 1. Klinische evangst met OSIX® PLUS, een dunne versie van het membraan, zijn niet op tekenen van ontsteking na onbedeelde blootstelling. Het membraan wordt langzaam afgebroken in de orale omgeving en het biocompatibele gebied wordt binnen enkele weken bedekt door bindweefsel en epitheel (zie referenties a-h hieronder).
 - 2. Mogelijke complicaties bij elke chirurgische ingreep in de orale en maxillofaciale regio omvatten: infectie, loskomen van de flap, perichthite, abcessvorming, botverlies, pijn, onregelmatigheden aan het zachte weefsel en complicaties door het gebruik van anesthesie.
 - 3. De handtekening kan beslissen dat verwijdering van het membraan kan worden overgevoerd zijn, afhankelijk van het type en de ernst van de complicaties.

BEWARING EN HANTERING

1. OSIX® VOLUMAX moet worden gebruikt door deskundige, ervaren en/of speciaal daartoe opgeleide tandheelkundigen.
2. Het materiaal moet worden gehanteerd met steriele handschoenen of steriele traumatische instrumenten.
3. OSIX® VOLUMAX moet worden geplaatst nadat het membraan gedurende 30 seconden in een zuigtoestel wordt gedompeld.
4. Gebruik het membraan niet als het onderliggende weefsel is bedekt. Gebruik het membraan niet als de steriele verpakking geopend en/of beschadigd is.
5. Eventueel resterend/ongebruikt membraan moet volgens de plaatselijke reguleringen worden verwijderd.
6. OSIX® VOLUMAX moet worden bewaard bij een temperatuur tussen 15 en 30°C.
7. Gebruik het membraan niet na de vervaldatum.

LEVERING

1. OSIX® VOLUMAX wordt geleverd in een dubbele blisterverpakking en is voor eenmalig gebruik. Elke verpakking bevat één membraan.
2. OSIX® VOLUMAX wordt verkocht in vier maten: 10x12,5 mm, 15x25 mm, 25x30 mm en 10x40 mm.

Voor hulp/support/verragen neemt u contact op met de plaatselijke distributeur of fabrikant.

Resorberbar kollagenmembran

Instruksjoner for bruk av OSIX® VOLUMAX

BEKRIVELSE
OSIX® VOLUMAX er en biologisk nedbrytbar og bioferent kollagenmembran beregnet for bruk ved styrt vevsregenerasjon og bevingenering. Den er fremstilt ved bruk av standardiserte og kontrollerte produktjonsprosedyrer.

Kollagenet er utvunnet av grasseer som har undergått veterinærkontroll og renses for å unngå hypersensitivtetsreaksjoner. OSIX® VOLUMAX er pakket i en dobbeltblistert pakning med steriliserte og kontrollerte produktjonsprosedyrer.

OSIX® VOLUMAX er beregnet for engangsbruk.

EGENSKAPER
OSIX® VOLUMAX har vist seg å være biokompatibel. Klinisk testing på mennesker og dyr viser en full mulighet for å fremkalle overfølsomhet.

OSIX® VOLUMAX har en porus struktur. Porestørrelsen er liten nok til å vrike okkludere på gingivale celler, men stor nok til å tillate gjennomgående av vasker, næringsstoffer og plasmoproteiner som er nødvendige for healing (se referanse h nedenfor).

OSIX® VOLUMAX kan ikke selvbrønde, og anbefales derfor for bruk i støttesamlinger som en augten transplantasjon, alltransplantat, xenotransplantasjon eller ved osteokondruktiv og/eller induktiv beinstubstitusj, eller en blanding av disse.

OSIX® VOLUMAX gir ikke i oppløsning eller brytes ned når den er våt. OSIX® VOLUMAX tilpasser seg lett formen på alveolaranden.

OSIX® VOLUMAX ontbndt en desinfiserende egenskap når det er nat. OSIX® VOLUMAX past zich gemakkelig aan de vorm van de alveolaire rand aan.

INDIKASJONER
OSIX® VOLUMAX er en resorbierbar kollagenmembran beregnet for bruk ved styrt bevingenerasjon (GTR) og styrt vevsregenerasjon (GTR), som en biologisk nedbrytbar barriere for:

1. Augmentasjon av lannkjøtranden for senere implantatinnlegg.
2. Simultan augmentasjon av lannkjøtranden og implantatinnleggelse.
3. Augmentasjon av lannkjøtranden rundt implanter som er innsatt på eldre ekstraksjonssteder.
4. Augmentasjon av lannkjøtranden rundt implanter som er innsatt på nye ekstraksjonssteder.
5. Preservering av alveolaranden etter (tan)ektorsjoner.
6. Over vinduet ved ingreep med lateralt sinuslæving.
7. På implantater med vertikal beinforst til grunn av infeksjon, men på tilstede i et periodontalt stadium, ved å definisere av implantatets overflate kan oppnås.
8. Ved interne beinfekter rundt tenene.
9. I behandlingen av reesjonsdefekter, sammen med en koronat plassert hudflap.
10. Ved foringsdefekter i flere rotfylte tenner.
11. Lokaliseret gingival augmentasjon.

KONTRAINDIKASJONER
OSIX® VOLUMAX må ikke brukes hos:

1. Pasienter med kollagen-hypersensitivitet.
2. Pasienter med sensitivitet for materialer som stammer fra svin.
3. Pasienter som lider av autoimmune sykdommer og bindevevsykdommer, som bl.a. systemisk lupus erythematosus, dermatomyositt, osv.

ADVARSLER OG FORHOLDSREGLER

1. OSIX® VOLUMAX er beregnet for engangsbruk. OSIX® VOLUMAX må ikke steriliseres på nytt.
2. Behandlingen av hver pasienten som ryker, pasienter som lider av ukontrollert diabetes mellitus og ukontrollert periodontal sykdom kan svikte.
3. Sikkerheten ved OSIX® VOLUMAX i behandlingen av gravide og ammende kvinner og barn er ennå ikke etablert.
4. Effekten av regenerative prosedyrer hos pasienter som lider av ubehandlede periodontitis kan svikte. Infeksjonskontroll og god munhygiene må være på stedet før et kirurgisk ingreep.

UNØSKTE REAKSJONER

1. Erfaringer med OSIX® PLUS, som er en tynne versjon av membranen, etter at det ble gjort viter at den har en utmerket sikkerhetsprofil.
2. Uønskede reaksjoner på OSIX® PLUS kollagenmembran ble ikke observert.
3. Men da membranen er av kollagen, kan ikke allergiske reaksjoner (for eksempel erytheem, indrasjon og/eller pruntus på behandlingsstedet) utelukkes fullstendig.

BRUKSINSTRUKSJONER

1. Spesiale instruksjoner for bruk i periodonti:
 - En grunnleggende forutsetning for en vellykket periodontal behandling innebærer å fjerne den underliggende bakterieinfeksjon samt å oppnå tilstrekkelig munhygiene. Før et kirurgisk ingreep må pasientene derfor gjennomgå en hygienebehandling som består av instruksjoner om munhygiene, fjerning av tannstein og rensing, samt okkusal justering ved behov. En postoperativ vedlikeholdsfase kan bidra til å sikre langsigelig terapeutisk suksess.
 - 2. Bedefekten skal avdekket av den fulle tykkelsten til de mucoperiosteale lappene.
 - 3. All mykvev skal fjernes.
 - 4. Ved GTR skal rittalen renses omhyggelig og planeres. Kondisjonering av GTR-området er viktig for et godt resultat.
 - 5. Den kortikale platten kan perforeres slik at benev fra benmargin kan kolonisere regenereringsstedet.
 - 6. OSIX® VOLUMAX fjernes fra pakningen på aspektisk måte ved bruk av sterile traumatiske instrumenter og sterile handsker som skylles i en steril saltoppløsning.
 - 7. OSIX® VOLUMAX skal legges i en steril saltoppløsning (den indre bisten kan brukes som en skål) 30 sekunder, slik at den kan utvides til sin endelige størrelse (10x12,5 mm, 15x25 mm, 25x30 mm, 10x40 mm). Forberedende beskjæring til antatt endelig størrelse kan utføres før nedersjing i en steril saltoppløsning.
 - 8. Beskjæring til ønsket størrelse. Det anbefales at OSIX® VOLUMAX skal legges i en steril saltoppløsning (den indre bisten kan brukes som en skål) 30 sekunder, slik at den kan utvides til sin endelige størrelse (10x12,5 mm, 15x25 mm, 25x30 mm, 10x40 mm). Forberedende beskjæring til antatt endelig størrelse kan utføres før nedersjing i en steril saltoppløsning.
 - 9. OSIX® VOLUMAX skal legges i en steril saltoppløsning (den indre bisten kan brukes som en skål) 30 sekunder, slik at den kan utvides til sin endelige størrelse (10x12,5 mm, 15x25 mm, 25x30 mm, 10x40 mm). Forberedende beskjæring til antatt endelig størrelse kan utføres før nedersjing i en steril saltoppløsning.
 - 10. OSIX® VOLUMAX skal legges i en steril saltoppløsning (den indre bisten kan brukes som en skål) 30 sekunder, slik at den kan utvides til sin endelige størrelse (10x12,5 mm, 15x25 mm, 25x30 mm, 10x40 mm). Forberedende beskjæring til antatt endelig størrelse kan utføres før nedersjing i en steril saltoppløsning.
 - 11. OSIX® VOLUMAX skal legges i en steril saltoppløsning (den indre bisten kan brukes som en skål) 30 sekunder, slik at den kan utvides til sin endelige størrelse (10x12,5 mm, 15x25 mm, 25x30 mm, 10x40 mm). Forberedende beskjæring til antatt endelig størrelse kan utføres før nedersjing i en steril saltoppløsning.
 - 12. Mucoperiosteale lappene sys sammen uten å strekke vevet. Blodtilførsel til det defekte området må ikke settes i fare.
 - 13. Ved GTR kan det overveies å bruke en periodontal forbinding.

VEILDNING FOR PASIENTEN

Det er nødvendig å følge bruksinstruksjonene samtidig som at pasienten moter veiledning, om et kirurgisk ingreep skal bli vellykket.

1. Pasienten må informeres om nødvendig munhygiene før operasjonen og omhyggelig profilaksis.
2. Postoperativt opplegg, f.eks.:
 - Bløt fode, unngå kontakt med tunge, hard fode eller proteser.
 - Unngå kontakt med varm mat eller drikk, som kan føre til tidlig desintegrering av kollagenmatrisen
 - Etter fjerning av suturene må det skylles med klorheksidin i ett minutt, to ganger om dagen, eller i følge produsentens instruksjoner.

POSTOPERATIVE TEGN

1. Klinisk erfaring med OSIX® PLUS, som er en tynne versjon av membranen, har ikke påvirket noen tegn på infammasjon eller utvikling av nekrose. Membranen brytes sakte ned i munmiljøet, og det avdekkede området dekkes med bindevev og eptel i løpet av noen få uker (se referanse a-h nedenfor).
2. Mulige komplikasjoner etter alle kirurgiske ingreep i munrommet og det maksillo-facial-området omfatter: infeksjon, vevsdød i hudflap, perforasjon, abcessdannelse, betent, smerte, uregelmessigheter ved mykvek og kompasjoner forbundet med bruk av bedøvelse.
3. Avhengig av lannkjernes type og av komplikasjonens type og alvorlighetsgrad, kan en mulig fjerning av membranen indikeres.

OPBEVARING OG HÅNTERING

1. OSIX® VOLUMAX skal brukes av dyktige, erfarte og/eller opplærte lannkirurger.
2. Materialet må håndteres ved bruk av sterile handsker eller sterile traumatiske instrumenter.
3. Plassering av OSIX® VOLUMAX skal utføres etter at membranen har ligget i en saltoppløsning 30 sekunder.
4. Ikke bruk membranen hvis den har en rift og/eller er skadet.
5. Ikke bruk membranen hvis den sterile pakningen er åpnet og/eller skadet.
6. Alle gjennevrettede/brukte membraner skal avhendes i henhold til lokale regler.
7. OSIX® VOLUMAX skal lagres ved en temperatur mellom 15-30°C.
8. Ikke bruk membranen etter utløpsdatoen.

LEVERANSESTILSTAND

1. OSIX® VOLUMAX leveres i en dobbelt blisterpakke og er kun for engangsbruk. Hver pakke inneholder én membran.
2. OSIX® VOLUMAX er tilgjengelig i fire størrelser: 10x12,5 mm, 15x25 mm, 25x30 mm og 10x40 mm.

Kontakt din lokale distributor eller produsent for videre assistanse/stele/ spørsmål.

Gerri Emilebilir Kollajen Membran

OSIX® VOLUMAX Kullanma Talimatı

TANIM
OSIX® VOLUMAX, yönlendirilmiş doku ve kemik rejenerasyonu sürecinde kullanılan standartize, biyolojik olarak bzu ve biyoyumlu bir kollajen membrandır. Standartize ve kontrol altında üretim sürecinde üretilmiştir.

Kollajen, veterinerlerin incelenesine tabi tutulmuş ve ayrı duyurukl reaksiyonların önlenmesi için salafiyetimsiz domuzdan elde edilmiş tendonlardan ekstraksiyonla alınır OSIX® VOLUMAX bir karton kütle halinde bulunan mükemmel bir çift blister içinde paketlenmiştir ve son olarak Etlen Oksitli (EO) sterilize edilmiştir.

OSIX® VOLUMAX'ın tek kullanımlık olması amaçlanmıştır.

ÖZELLİKLER
OSIX® VOLUMAX'ın biyoyumlu olduğu gösterilmiştir. Hayvan ve insan klinik testleri düşük bir ayrı duyurukl oluşturma potansiyeli göstermektedir.

OSIX® VOLUMAX poröz bir yapıya sahiptir; porların büyüklüğü gingival hücreleri engelleyecek kadar küçükür, ama yileşimden desteklenmesi için gereken sıvılar, besin maddeleri ve plazma proteinlerini geçmesine izin vererek kadar büyütür (bakınız aşağıda referans h).

OSIX® VOLUMAX kendi kendine desteklenmez ve bu nedenle etojen kemik grefti, allograft, ksenoraft, osteoinduktif veya induktif kemik yeriin alan maddesi ya da bunların kanyimsıyla birlikte kullanılması önerilir.

OSIX® VOLUMAX alveolar köşelerde ve dezentagasyon oluşmaz. OSIX® VOLUMAX alveolar köşelerde çekilme kolaylaştırıcı uyur.

Bir hayvan çalışması gösterdiğine göre OSIX® VOLUMAX bzuunması yaklaşık 6 ay içinde tamamlanır.

ENDIKASJONLAR
OSIX® VOLUMAX, yönlendirilmiş kemik rejenerasyonu (GBR) ve yönlendirilmiş doku rejenerasyonu (GTR) sürecinde aşağıdaki gibi biyolojik olarak bzu bir banyer olarak kullanılması amaçlanmıştır rezorbe edilebilir bir kollajen membrandır:

1. Daha sonra implant inşerasyonu için krete bütme.
2. Aynı anda krete bütme ve implant inşerasyonu.
3. Geçmiş ekstraksiyon bölgelerine yerleşimsiz implantları etrafında krete bütme.
4. O anda ekstraksiyon bölgelerine yerleşimsiz implantları etrafında krete bütme.
5. Disya veya kırıkça; diş ekstraksiyonu sonrasında alveolar krete bütme.
6. Laterale penore sine yükseltilmiş implantların penore uzamından. Ertesi gün implantların sonu, tedavisi yileşimden periodontitis olan hastaların debridman ve implant yitimi düzeylerini azaltma edilebilir-lye olabilir.
8. Dişler etrafındaki kemik içi defektleride
9. Koronal komorandimiyen defektleri birlikte reesyon defektlerini tedavişne
10. Yaka kırıklarında defektleri i tander med flera rötter.
11. Lokaliseret augmentasjon av tandkötet.

KONTRAINDIKASYONLAR
OSIX® VOLUMAX şu kişilerde kullanılmamalıdır

1. Kollajene ayrı duyurukl bilinen hastalar.
2. Domuz kökenli materyallerle duyarlı hastalar.
3. Şuilar gibi otomatik hastalıklar ve bağı dokusu hastalıkları olan hastalar: sistemik lupus eritematosus, dermatomyositt, osv.

UYARILAR VE ÖNEMLER

1. OSIX® VOLUMAX'ın tek kullanımlık olması amaçlanmıştır. OSIX® VOLUMAX tekrar sterilisasyon için uygun değildir.
2. Sigara içenler, kontrolsüz diabetes mellitusu olan hastalar ve kontrolsüz periodontal hastalığı olanlar gibi yüksek riskli hastaların tedavisinde istenildiği gibi olmayabilir.
3. OSIX® VOLUMAX ile hamile ve emziren kadınlara ve çocukların tedavisinde güvenilirligi henüz belli değildir.
4. Ertesi gün implantların sonu, tedavisi yileşimden periodontitis olan hastaların debridman ve implant yitimi düzeylerini azaltma edilebilir-lye olabilir. Çerrişimden önce enfeksiyon kontrolü ve iyi oral hyien sağlanmalıdır.

ADVERS OYLAR

1. Membranın daha önce bir skeli olan OSIX® PLUS ile pazaramıza sonra- sı deneyimimizden bir güvenlik profili ortaya koymuştur.
2. OSIX® PLUS kollajen membranıyla advers reaksiyonlar gözlenmemiştir.
3. Ancak membran kollajen kökenli oluğundan alerjik reaksiyonlar (örneğin, böğsüne etem, siğik, sertleşme veya kaşıntı) hiç olmayacak denezem.

KULLANIM ENDIKASYONLARI

1. Periodontolojide kullanılm için özel talimat: Başarı periodontal tedavii için temel bir gereklilik aynı zamanda bakteriyel enfeksiyonu ortadan kaldırmak ve yerli oral hyienidir. Bu nedenle cerrahi girişim öncesinde hastaların oral hyien talimatı verilmesi, diş taşlarının temizlenmesi ve diş köklerinin düzenlenmesi ve enfeksiyonun ortadan kaldırılması şartları temel gerekliliklerdir (ie. biler- tir, bir kap olarak kullanılması) sonu boyutlarına (10x12,5 mm, 15x25 mm, 25x30 mm ve 10x40 mm) genişlemişimden beklemesi gerekir. Steril salin batırmada önce tahmini son büyüklüğüne önceden krete işleme yapılabilir.
2. Kemik boyutları kırpm: OSIX® VOLUMAX'ın defektli yarılarda 3-4 mm dişarı uzaması önerilir. Bu nedenle, saçın buna göre kuyulmalıdır. Dişin yarılarda bir ila iki mm ortılışımı gerekli mutlaka izin verilmelidir.
3. OSIX® VOLUMAX şablonu ymas için sterli maksakula kesilir (steril bir kap içzerinde) ve atramatik aletlerle defektleri bu deneme yapılmalıdır.
4. Büyük defekt bölg, bölümlü devam ettiren bir materyalde döndürül- mektir; Kullanc, kullanılm materyal aşından ürünün talimatını izlemelidir.
5. OSIX® VOLUMAX lingual flep altında sabitlenmiş, sonra bir kemik grefti yerleşimsiz ve membran, defektin üzerine dikilme türü kullanılır. Membran aynı yatan okukuya yapışır; membranın erken olarak sabitleme- nesine değerdendirilmelidir. Yalnızca yeri raplyeriye sabitleme veya kalıpla filer i membran. Derinot anbesilde det a fests membran med overliggende suturer. Dette kan oppnås gode for ankrene en madrasatur bukkat og lingvalt i det apikale periosteum.
6. Mucoperiosteale lappene sys sammen uten å strekke vevet. Blodtilførsel til det defekte området må ikke settes i fare.
7. GTR için emilebilir bir periodontal pansuman kullanılması dşünülebilir.

HASTA İÇİN KILAVUZ İZLEMLER

Herhang bir cerrahi tedavinin başarısı, kullaama talimatının izlenmesi ve aşağıdaki gibi hassas yönlendirilmiş bakımla:

1. Yeteri oral hyiene ve öznel profilaksis ile ilgili preparatlarla daha eğitimli.
2. Postoperatif bakım, f.eks.:
 - Bløt diyet, unngå kontakt med tungen, hard fode eller proteser.
 - Kollajen matrisin erken parçalanmasını önleyecek şekilde diş gidalere veya sıvılara temasını kaçınma
 - Sütürler alındıktan sonra güncce iki kez birer dakika veya kollajen talimatına göre klorheksidinle gargara.

POSTERATİF HATIRLATILAR

1. Membranın daha önce bir skeli olan OSIX® PLUS ile klinik deneyimimizden bir güvenlik profili ortaya koymuştur.
2. OSIX® PLUS kollajen membranıyla advers reaksiyonlar gözlenmemiştir.
3. Ancak membran kollajen kökenli oluğundan alerjik reaksiyonlar (örneğin, böğsüne etem, siğik, sertleşme veya kaşıntı) hiç olmayacak denezem.
4. Membranın daha önce bir skeli olan OSIX® PLUS ile pazaramıza sonra- sı deneyimimizden bir güvenlik profili ortaya koymuştur.
5. Ancak membran kollajen kökenli oluğundan alerjik reaksiyonlar (örneğin, böğsüne etem, siğik, sertleşme veya kaşıntı) hiç olmayacak denezem.
6. Membranın daha önce bir skeli olan OSIX® PLUS ile pazaramıza sonra- sı deneyimimizden bir güvenlik profili ortaya koymuştur.
7. Ancak membran kollajen kökenli oluğundan alerjik reaksiyonlar (örneğin, böğsüne etem, siğik, sertleşme veya kaşıntı) hiç olmayacak denezem.

SAKLAMA VE MUAMELE

1. OSIX® VOLUMAX etni, deneyimi veya eğitimli diş cerrahlarına kullanılmalıdır.
2. Materyal sterl edilmelidir veya sterli atramatik aletlerle tutulmalıdır.
3. OSIX® VOLUMAX kullanılm materyal aşından ürünün talimatını izlemelidir.
4. Membran yitilme veya hasarlıysa kullanılmamalıdır.
5. Membran sterli ambalajı açık veya hasarlıysa kullanılmamalıdır.
6. Herhang bir atrantulanıması membran yeri düzenlenmelidir göre atılmalıdır.
7. OSIX® VOLUMAX 15-30°C (59-86°F) aralığında saklanmalıdır.
8. Membran son kullanma tarihinden sonra kullanılmamalıdır.

SAGLAMAMA SEKLI

1. OSIX® VOLUMAX sadece tek kullanımı için bir çift
